Instructions for before and after Surgery
Laminectomy, Facetectomy, Discectomy, Laminotomy, Foraminotomy

Before You Have Surgery

Do not eat or drink after midnight the night before surgery. Please take all routine medications the day of surgery unless otherwise directed by Dr. Mathur, his Nurse (Melissa), or Hospital Staff.

Medications to stop prior to surgery:

You may stay overnight in the hospital. Please bring your brace to the hospital the day of surgery. While you recover at home it is important you protect your spine as it heals. This can best be achieved by following the below instructions and contacting your nurse with any questions or concerns.

When You Return Home

Your initial activity level will be influenced by the anesthetic agent you have received. It is not uncommon to feel drowsy or tired for a number of hours. Rest when you need it. Symptoms may peak at 2-5 days after surgery, and then will begin to subside.

Diet:

- Return to your normal diet slowly as tolerated.
- Calories and protein are very important for the healing process. Restricting these is not recommended during this time.

Back Brace:

- Remove your brace to sleep and shower.
- You will wear your brace when sitting or standing longer than 10minutes.
- You are to wear your back brace until you come to your first post op appointment. At this time we will discuss further use of the brace. It is commonly needed until 6 weeks after surgery.
- The purpose of your brace is to stabilize your back to allow for superior healing.

Incision Care/Shower:

- You will have a dry dressing (gauze & tape) over your incision when you leave the hospital.
- You may need to change your dressing once per day to keep it dry and clean- Gauze & Tape.
- Your incision will be closed with internal stitches that will dissolve by themselves, and surgical glue on top. The glue may start to flake off, this is normal. Please do not pull off the glue.
- Your incision may also be covered with steri-strips. These will fall off.
- **You may take a shower 3 days after surgery if you have internal stitches and glue.**
- Allow soapy water to fall over incision. No scrubbing.
- If you have exterior stitches or staples we will remove them at your first post op visit.
 - **If you have exterior stitches or staples you may shower 5 days after surgery.**
- After your shower you do not have to keep your incision covered unless it is leaking/ has drainage.
- DO NOT use any creams, oils, lotions or medications on incision until approved by Dr. Mathur.

Pain/Medications:

- **Pain is expected after surgery.**
- Please take the prescribed medication that was provided for you after surgery as directed, as needed.
- Pain medication can be constipating. Please try and prevent this with Colace or other over the counter stool softeners or laxatives which can be purchased at the pharmacy.
- If possible, after the first 2 weeks after surgery, efforts should be made to start decreasing pain medication intake.

www.caryortho.com www.mathurspinesurgery.com

- The pain medication that has been provided has Tylenol in it; please do not take any extra Tylenol.
- You may take Ibuprofen products in-between to help with breakthrough pain.
- You may resume all other prior medications.

Activity:

- **You may sleep on your back or your side.** No belly sleeping. If you sleep on your side please place a pillow in-between your knees to support your spine.
- **We encourage you to walk!** It will help the healing process by moving your blood in your body and will increase/maintain muscle strength. With this said, take it slow. Walk as tolerated.
- No dog walking until approved by Dr. Mathur or his clinical staff.
- No pools, bath tubs, Jacuzzis, Etc. Until approved by Dr. Mathur, about 6 weeks after surgery.
- No lifting more than 20 pounds.
- Practice good posture when you walk and sit. This helps reduce stress on your back.
- Driving: You must wait at least 5 days after surgery to drive.
 - At this time, you may drive if pain is controlled and no weakness/numbness is present in your legs.

Work:

- Most patients may return to work after their first post op appointment. This is dependent upon your job requirements. Please discuss this with Dr. Mathur or his nurse.
- Work notes will be provided as needed. You may request a work note at your appointment or call the nurse as work allowances increase and notes may need to be adapted.

Follow-Up:

- Your first follow up appointment will be scheduled 10 days after surgery. Healing is gradual and you will follow up over the next year.
- Physical Therapy will begin after your first post op appointment.

Call your nurse if you have any of the following:

1. Fever and/or Chills
2. Redness or excessive discharge at incision
3. Headache
4. New Numbness or Weakness

Please call your nurse with any questions or concerns. The nurse is available Monday-Friday 8am-5pm. If you need immediate/emergent help after hours please go to your local emergency department.
